

TUBE CLEANERS

Tube cleaners, pellets, projectiles, pigs, polyshots, ferrets etc. are made in many shapes and sizes, from different materials with different coatings for all types of applications. Sizes from Ø5mm to Ø1800mm in open cell polyurethane foam, moulded rubber to steel mandrel for wiping clean to re-sizing. They can be plain or have a scoured type end or wrapping, brushes attached, replaceable rubber wipers or silicon carbide coating. They come in shapes like bi-directional plugs to spheres to bullets etc.

Used to recover product, separate product and clean and will travel through multiple diameter pipelines, go around mitred bends and short radius 90 degree bends.

We call them "pigs" and supply the open cell polyurethane type in 3 grades and many sizes.

All our pigs are available in sizes:
1", 1.5", 2", 2.5", 3", 4" and 6"

Standard Pig →

Generally used for product recovery,
product separation and wiping.

← Abrasive Pig

A standard pig with the scourer on the leading face.
Used for a light cleaning of the pipe or tube and
should be followed by the standard pig.

Abrasive Wrap Pig →

A standard pig with the scourer wrapped around the
diameter. Used to remove light scale inside the pipe or
tube and should be followed by the standard pig.
